The University of Michigan Press. Paperback. Book Condition: new. BRAND NEW, The Woman Who Knew Too Much: Alice Stewart and the Secrets of Radiation (New edition), Gayle Greene, Helen Caldicott, Dr. Alice Stewart is a British epidemiologist who revolutionized the concept of radiation risk. Born in 1906, she is an outstanding scientist with more than 400 peer-reviewed papers to her name and someone who has taken courageous and effective stands on public issues. Yet her controversial work lies at the center of a political storm and so has only relatively recently begun to receive significant attention. For more than forty years, Stewart has warned that low-dose radiation is more dangerous than has been acknowledged. While teaching at Oxford in the 1950s she began research that led to the discovery that fetal x-rays double the child's risk of developing cancer. As a result, doctors no longer x-ray pregnant women. Two decades later--when she was in her seventies--she again astounded the scientific world with a study showing that the U.S. nuclear weapons industry is about twenty times more dangerous than safety regulations permit. The finding put her at the center of the international controversy over radiation risk. In recent years, she has become one of a handful of independent scientists whose work is a lodestone to the anti-nuclear movement. In 1990, the New York Times called her "perhaps the Energy Department's most influential and feared scientific critic." The Woman Who Knew Too Much traces Dr. Stewart's life and career from her early childhood in Sheffield to her medical education at Cambridge to her research positions at Oxford and the University of Birmingham. The book joins a growing number of biographies of pioneering women scientists such as Barbara McClintock, Rosalind Franklin and Lise Meitner and will find a wide range of appreciative readers, including those...
