Thus if the eye be still at an infinite distance, but in the direction at, the projection will have the direction co , but its length will remain equal to ca . Thus the direction of the projecting lines may be parallel to any element of the cone whose axis is ca , the angle at the vertex a being 90 , since all these elements make angles of 45 with the picture plane MN . 217. Now any line which lies in the picture plane is its own projection. In representing a cube, therefore, as in Fig. 148, we may assume its nearer face to lie in that plane, and it will thus appear of its true form and size, that is, a square, as shown. From the preceding it follows at once that the edges which are perpendicular to AW may be represented by parallel lines...
